Summary

Final-year Computer Science student and full-stack developer with experience building scalable, production-grade systems. Strong focus on writing maintainable, extensible code and designing reliable backend architectures. Experienced in developing real-time and AI-powered applications, with a proven ability to take features from idea to deployment.

Education

Abdul Kalam Technical University

Sept. 2022 – May 2026

Bachelor of Technology in Computer Science (GPA: 7.9/10.0)

Uttar Pradesh, India

Technical Skills

Languages: C, C++, JavaScript, TypeScript, Python

Frontend/Mobile: React.js, Next.js 15, HTML5, CSS3, Tailwind CSS, Redux Toolkit, Zustand

Backend: Node.js, Express.js, NextAuth.js, RESTful APIs, WebSocket, OAuth

Databases: MongoDB, Firebase, MySQL, Postgresql

AI/ML: OpenAI API, Gemini, Claude, Deepseek, Open Router, Google Earth Engine

Developer Tools: Git, GitHub, VS Code, Cursor AI, GitHub Copilot, Postman, Cloudinary, Vercel, Netlify, Render

Experience

INA Internet Group

Dec. 2025 - Feb. 2026

Software Development Engineer (SDE) Intern

Remote

- Collaborated with cross-functional stakeholders to design and implement scalable backend systems for a HealthTech platform.
- Designed and developed REST APIs with focus on maintainability, modularity, and secure RBAC-based access control.
- Executed slot locking and concurrency-safe booking systems, improving system reliability under concurrent usage.
- Built admin dashboards enabling data-driven decision-making, reducing manual operations by 40%.

Projects

AI Resume Roaster [🔗](#) | *React, TypeScript, Node.js, Express, OpenRouter, Tailwind CSS, Vite, PDF Parsing* **Mar. 2025**

- Built an AI-powered resume analysis platform that evaluates resumes with recruiter-style feedback, ATS scoring, and improvement suggestions using LLM APIs.
- Implemented a full-stack architecture supporting PDF upload, parsing, AI evaluation, and structured JSON feedback generation.
- Created a terminal-style Matrix-themed UI to display AI roast results interactively, improving user engagement and creating a developer-focused UX.

PrepPilot [🔗](#) | *Next.js, Node.js, Express.js, TypeScript, Tailwind CSS, WebSockets, GroqAI*

Nov. 2024

- Engineered a real-time, AI-powered interview preparation tool that generates customized multiple-choice questions based on job descriptions.
- Developed backend-driven state management to prevent client-side tampering, improving system integrity.
- Simulated production-like environments to test reliability of real-time evaluation systems.
- Built a production-ready responsive frontend, achieving a seamless cross-device user experience.

Semantic Segmentation of Satellite Imagery [🔗](#) | *React.js, Leaflet, Deep Learning, Google Earth Engine*

Oct. 2024

- A two-layer semantic segmentation pipeline combining classical machine learning models with a pre-trained deep learning model (SAM-2).
- Applied an interactive OGC-certified web-based GIS interface using Leaflet, enabling users to select Regions of Interest (ROI) and define class-specific sample points directly on satellite imagery.
- Worked with geospatial datasets and optimized rendering performance for large-scale map interactions.

Achievements

- **Smart India Hackathon 2024 National Finalist:** Smart India Hackathon 2024 National Finalist – Top 1% among 15,000+ teams nationwide
- **Code Wars 2023 Winner:** Winner, Code Wars 2023 – Secured 1st place among 100+ participants
